This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

2.0 Product Description						
Product	Crystalline Silicon Photovoltaic Module					
Brand name	Gstar, STDARD					
Description	The product covered by this report are terrestrial used photovoltaic modules which convert elements of the electromagnetic spectrum to DC electrical power. The basic construction consists of a laminated assembly of solar cells, mostly Bifacial solar cells, which are interconnected with conductive matrial such as ribbons, and encapsulated within an insulating material. This encapsulated assembly is sandwiched between two transparent glass flat sheets. The laminated assembly mostly be supported by an anodized Aluminum frame. Field wiring connections to the module are made via a factory installed junction box with polarized mating cables and connectors. The modules include a weatherproof junction box with mating connectors only provided for field-connection. The modules are manufactured from the factory and shipped fully assembled. An installation manual is provided. The modules must be mounted over a fire resistant roof covering material rated for the application. Internal buss ribbon wires, and cross buss ribbon wires are enclosed within the module front cover and back substrate. Bypass diodes are provided inside the junction box. Modules are intended to be installed in accordance with the National Electrical Code, NFPA 70 and Canadian Electrical Code (CEC) respectively.					
Models	GSD7S followed by 78T-; followed by 610, 615, 620, 625, 630, 635 or 640; followed by WT or BT. GSD7S followed by 72T-; followed by 565, 570, 575, 580, 585 or 590; followed by WT or BT. GSD7S followed by 66T-; followed by 515, 520, 525, 530, 535 or 540; followed by WT or BT. GSD7S followed by 60T-; followed by 470, 475, 480, 485 or 490; followed by WT or BT. GSD7S followed by 54T-; followed by 420, 425, 430, 435 or 440; followed by WT or BT. GSD8J66M followed by 650, 655, 660, 665, 670 or 675; followed by WT or BT. GSD8J66M followed by 590, 595, 600, 605 or 610; followed by WT or BT. GSD7G78M followed by 575, 580, 585, 590, 595, 600, 605 or 610; followed by WT or BT. GSD7G72M followed by 530, 535, 540, 545, 550, 555 or 560; followed by WT or BT. GSD7G66M followed by 485, 490, 495, 500, 505, 510 or 515; followed by WT or BT. GSD7G66M followed by 440, 445, 450, 455, 460, 465 or 470; followed by WT or BT. GSD7G54M followed by 395, 400, 405, 410, 415 or 420; followed by WT or BT.					
Model Similarity	All Models have similar structure. For Model name 'GSDaabbc-xxxdd' where, aa = denotes cell size, '7S' means 182mm solar cell with 16 busbars, '7G' means 182mm solar cell with 10 busbars, '8J' means 210mm solar cell with 12 busbars. bb = denotes quantity of solar cell, could be 78, 72, 66, 60 or 54, represent 156, 144, 132, 120 or 108 pieces solar cell, respectively. c = denotes cell technology, 'T' means Topcon, 'M' means monocrystalline PERC xxx = Pmax dd = backsheet color, can be blank or 'WT' or 'BT', where 'WT' means backsheet glass has white mesh, and 'BT' means black mesh.

1) Not all item numbers are indicated (called out) in the photos, as their location is obvious.

2) "Various" means any type, from any manufacturer that complies with the "Technical data and securement means" and meets the "Mark(s) of conformity" can be used.

3) Indicates specific marks to be verified, which assures the agreed level of surveillance for the component. "NR" - indicates Unlisted and only visual examination is necessary. "See 5.0" indicates Unlisted components or assemblies to be evaluated periodically refer to section 5.0 for details.

4) Specific components combination requirements refer ILL4 and ILL5 in section 7

# 5.0 Critical Unlisted CEC Components

No Unlisted CEC components are used in this report.

#### 6.0 Critical Features

<u>Recognized Component</u> - A component part, which has been previously evaluated by an accredited body with restrictions and must be evaluated as part of the basic product considering the restrictions as specified by the Conditions of Acceptability.

<u>Listed Component</u> - A component part, which has been previously Listed or Certified by an accredited Certification Organization with no restrictions and is used in the intended application within its ratings.

<u>Unlisted Component</u> - A part that has not been previously evaluated to the appropriate designated component standard. It may also be a Listed or Recognized component that is being used outside of its evaluated Listing or component recognition.

<u>Critical Features/Components</u> - An essential part, material, subassembly, system, software, or accessory of a product that has a direct bearing on the product's conformance to applicable requirements of the product standard.

<u>Construction Details</u> - For specific construction details, reference should be made to the photographs and descriptions. All dimensions are approximate unless specified as exact or within a tolerance. In addition to the specific construction details described in this Report, the following general requirements also apply.

- <u>Spacing</u> At the wiring terminals, a minimum of 19.4mm\* through air and 10.4mm over surface spacing is
  provided between uninsulated live parts of opposite polarity (the negative and positive load terminals). At
  the module edges, a minimum of 19.4mm\* through air and 10.4mm over surface spacing is provided
  between the live parts including cells and interconnecting ribbons and the edges of the laminate before
  attachment of the frame. There are no grounded metal parts within the wiring compartment.
- 2. <u>Mechanical Assembly</u> The components of the laminate portion of the module are monolithically adhered with encapsulation material. The junction box is secured to the rear cover with adhesive and the junction box internal tabs are secured in place by pressure fit contact rails. The tabbing entering the junction box and the wire end connectors are secured with cable gland so they cannot be separated. The frame is form fitted around the perimeter of the laminate and adhered in place with adhesive. All of the parts of this module are secured in a way that prevents any shifting, rotating or turning of components.
- 3. <u>Corrosion Protection</u> All ferrous metal parts are protected against corrosion by painting, plating or the equivalent. These modules are made of a glass front cover and durable rear cover with all internal wiring fully encapsulated in a corrosion resistant package. The enclosures of junction box, wire leads and connectors are made of polymeric materials, and the frame is made of anodized Aluminum, each of which are inherently resistant to corrosion. Since all of the components of the modules are composed of such materials no additional corrosion protection is employed.
- 4. <u>Accessibility of Live Parts</u> All uninsulated live parts in primary circuitry are housed within a non-metallic enclosure constructed with no openings other than those specifically described in Sections 4 and 5. All uninsulated live parts in primary circuitry are housed within the junction box which is factory sealed and not user serviceable in the field therefore there are no accessible live parts.
- 5. <u>Grounding</u> All exposed dead-metal parts and all dead-metal parts within the enclosure that are exposed are connected to the equipment grounding terminal. Module with metal frame is clearly indicated with the appropriate ground connection point with a ground symbol marking. The means of grounding is specified in the installation instructions, see Illustration 3 in section 7.0.
- Polarized Connection Modules are provided with leads identified by the symbols (+) for Positive lead and (-) for negative lead on the lead. Each connector is polarized and cannot be joined to create an improper connection.
- 7. Internal Wiring Internal wiring is routed away from sharp or moving parts. Internal wiring leads terminating in soldered connections are made mechanically secure prior to soldering. Recognized Component separable (quick disconnect) connectors of the positive detent type, closed loop connectors, or other types specifically described in the text of this report are also acceptable as internal wiring terminals. At points where internal wiring passes through metal walls or partitions, the wiring insulation is protected against abrasion or damage by plastic bushings or grommets. The internal wiring such as cell connectors and string connectors on the module is within the encapsulation material or within the sealed junction box neither of which is designed for field accessibility nor service. Internal wiring is routed away from sharp or moving parts.
- 8. <u>Schematics</u> Refer to ILL1A~ILL2A in section 7 for schematics requiring verification during field representative Inspection Audits.
- 9. <u>Markings</u> The product is marked on a labeling system as described in item no. 15 of Section 4.0, information on the marking shall include:

#### 6.0 Critical Features a) name, registered brand name of applicant; b) model number designation; c) serial number; d) date and place of manufacture; alternatively serial number assuring traceability of date and place of manufacture, and won't repeat in 10 years; e) polarity of terminals or leads, PV connectors or wiring shall be marked in accordance to IEC 62852 with a symbol "Do not disconnect under load"; f) "Maximum system voltage" or "V<sub>svs</sub>"; g) Class of protection against electrical shock: Class II, or marked with a symbol instead, refer to ILL8C in section 7.0 for the symbol. h) "voltage at open-circuit" or "Voc" including manufacturing tolerances; i) "current at short-circuit;" or "lsc" including manufacturing tolerances; j) "PV module maximum power" or "Pmax" including manufacturing tolerances; k) "Maximum overcurrent protection rating" I)"PV module may be marked with "Fire Type: \_\_\_\_. See Installation Instructions for Installation Requirements to Achieve a Specified System Fire Class Rating with this Product"." All electrical data shall be shown as relative to standard test conditions (STC) (1000 W/m2, (25 ± 2) °C, AM 1,5 according to IEC 60904-3). 10. Cautionary Markings - The following is required: All cautionary text shall be marked in both english and french. a) PV module shall be marked 'Do not disconnect under load' and 'Ne vous déconnectez pas sous la charge.', or marked with a symbol instead. Refer to ILL6 or ILL6A in section 7 for the symbol. Symbol or warning notice shall be imprinted or labelled close to connector. PV connectors shall be clearly marked '+' and '-' to indicating the terminal polarity. b) Symbol of Caution, risk of electric shock shall be applied near the PV module electrical connection means. Refer to ILL6B in section 7 for the symbol. c) PV modules shall be marked to indicate the protective class, refer to ILL6C in section 7 for the symbol.

#### 6.0 Critical Features 11. Installation, Operating and Safety Instructions - Instructions for installation and use of this product are provided by the applicant: PV modules shall be supplied with documentation describing the methods of electrical and mechanical installation as well as the electrical ratings of the PV module. The documentation shall state the Class under which the PV module was qualified and any specific limitations required for that Class. The documentation shall state the environmental conditions to which the module has been qualified, which by default includes a temperature range of -40 °C to +40 °C and wind/snow load including safety factor. It shall be ensured that appropriate documentation for safe installation, use, and maintenance is available to installers and operators. For identical PV modules it is considered to be sufficient that one set of documentation is supplied with the PV module shipping unit. The module is considered to be in compliance with this standard only when the module is mounted in the manner specified by the mounting instructions. A module with exposed conductive parts is considered to be in compliance with this standard only when it is electrically grounded in accordance with the applicant's instructions and the requirements of the National Electrical Code, ANSI/NFPA 70 (2014-2017). Environmental conditions to which a PV module has been qualified may include IEC 61701 or IEC 62716. recommended maximum series/parallel PV module configurations; • the current rating of overcurrent protection, as determined in MST 26. Guidance to determine current rating may be given in to IEC 60269-6; • applicant's stated tolerance for Voc. Isc and maximum power output Pmax under standard test conditions: temperature coefficient for voltage at open-circuit, maximum power and short-circuit current. All electrical data shall be shown as relative to standard test conditions (1000 W/m2, (25 ± 2) °C, AM 1.5 according to IEC 60904-3). International symbols shall be used where applicable. The electrical documentation shall include a detailed description of the electrical installation wiring method to be used. This description shall include : • any limitations on wiring methods and wire management that apply to the junction box for the PV module; • specific PV connector model/types and manufacturer to which the PV module connectors can be mated; • the bonding and grounding method(s) to be used (if applicable) shall be specified. All provided or specified hardware shall be identified in the documentation; • the type and rating of bypass-diodes to be used as well as the installation instructions for those diodes (if applicable): • limitations to the mounting situation (e.g. slope, mounting means, cooling); • a statement indicating the fire rating(s) and the applied standard, or a statement that resistance to external resources was not evaluated, as well as the limitations to that rating (e.g. installation slope, substructure or other applicable installation information); • a statement indicating the minimum mechanical means for securing the PV module (as evaluated during the mechanical load test (MST 34)); and • a statement indicating the maximum altitude the PV module is designed for. De-ratings can be applied. The documentation for roof mounting shall include: • a statement indicating the minimum mechanical means for securing the PV module to the roof (as evaluated during the mechanical load test according (MST 34); • details of the specific parameter(s) when the fire rating is dependent on a specific mounting structure, specific spacing, or specific means of attachment to the roof or structure. The documentation shall include a statement advising that external or otherwise artificially concentrated sunlight shall not be directed onto the front or back face of the PV module (if not qualified for). Assembly instructions shall be provided with a product shipped in subassemblies and shall be detailed and adequate to the degree required to facilitate complete and safe assembly of the product to specific cations set forth in the IEC 61730 standard series.

#### 6.0 Critical Features

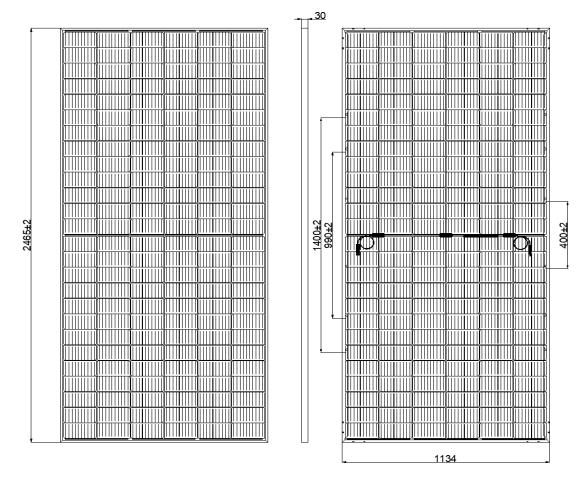

To facilitate proper system sizing the applicant shall include relevant parameters in the installation instructions that allow system layout based not only on STC values given in the documentation. For example a safety factor for Voc and Isc of 1,25 is recommended since irradiance is often higher then 1000 W/m2 and temperature below 25 °C may raise Voc.

The following or equivalent statement shall be included:

"Under normal conditions, a photovoltaic module is likely to experience conditions that produce higher current and/or voltage than reported at standard test conditions. Accordingly, the values of Isc and Voc marked on this PV module should be multiplied by a factor of 1,25 when determining component voltage ratings, conductor current ratings, and size of controls (e.g. inverter) connected to the PV output." The safety factor of 1,25 for the minimum voltage rating of the components can be modified during the design of a system according to the minimum temperature of the location of the installation and the temperature coefficient for Voc. Isc can be adjusted based on maximal temperature, irradiance and orientation of the module. To this end a full simulation for the specific location is required using long term weather data.

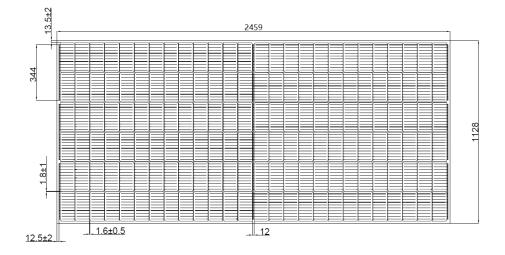

Refer to ILL3 in section 7 for Installation manual.

Damp heat test

Evaluation Period	March 31, 2023 to June 06, 2023		Project No	2307A0920HAN
Sample Rec. Date		Prototype		0230331-50
Test Location	Building No.2, No. 500 East Shuiyu			
Test Procedure	Testing Lab		g ony, zhojiang r	
	result includes consideration of mea	surement uncertain	ty from the test e	equipment and
	uct was tested as indicated below wit			
The following tests v 1. Frontsheet AR Cc 2. Solar Cell TS-TM 3. Encapsulate F406 4. Encapsulate EP36 5. Backsheet Heat S 5. Frame 6005-T6 m /IETNAM CO.,LTD 7. Adhesive of frame 3. UV test	10.31	10.31	4.10
Cold conditioning	10.32	10.32	-
Dry heat conditioning	10.33	10.33	-
Measurement of temperature coefficients	-	-	4.4
Performance at low irradiance	-	-	4.7
Outdoor exposure test	-	-	4.8
Hail test	-	-	4.17
Stabilization	-	_	4.19

The following tests were performed on GSD7S78T-620BT to verified the Backsheet Heat Strengthened Glass with black color grid manufactured by Flat (Vietnam) Co., Ltd.

Power ranges were verified on model GSD7S78T-610BT to GSD7S78T-640BT.

Test Description	[CSA C22.2#61730- 2:2019 Ed.2] Clause	Ed.1+R:30Apr2	[UL 61215-2:2017 Ed.1 ] Clause
Visual inspection	10.2	10.2	4.1
Maximum power determination	10.4	10.4	4.2
Durability of markings	10.6	10.6	-
Sharp edge test	10.7	10.7	_
Bypass diode functionality test	10.8		
Temperature test	10.15	10.15	-

Evaluation Period	June 05, 2023 to	o June 13, 2023	Project No.	2307A0920HAN		
Sample Rec. Date	31-Mar-2023	Condition Prototype	Sample ID.	0230331-50		
Test Location	Plant 5, No. 695	8 Daye Road, Fengxian District, Shang	ghai, China			
Test Procedure	Testing Lab					

Determination of the result includes consideration of measurement uncertainty from the test equipment and methods. The product was tested as indicated below with results in conformance to the relevant test criteria.

Tests were performed on GSD7S72T-565WT to verified the fire performance and Ignitability of components below:

1. Frontsheet AR Coated Heat Strengthened manufactured by Flat (Vietnam) Co., Ltd.

3. Encapsulate F406PS manufactured by First Material Science (Thailand) Co., Ltd.

4. Encapsulate EP304 manufactured by First Material Science (Thailand) Co., Ltd.

5. Backsheet Heat Strengthened Glass with white grid manufactured by Flat (Vietnam) Co., Ltd.

6. Adhesive (between junction box and backsheet) HT906Z manufactured by Shanghai Huitian New Material Co Ltd

Test Description			C22.2#61730- 2:2019 Ed.2] Clause	Ed.1+R:30Apr2 020] Clause	[UL 61215-2:2017 Ed.1 ] Clause	
Fire test (Type 29)			10.17	10.17	-	
Ignitability Test			10.18	I	-	
Evaluation Period	August 18, 2023	to October 13, 202	3		2309A0182SHA	
Sample Rec. Date	14-Aug-2023		Prototype		0230814-44	
Test Location	Building No.2, N	o. 500 East Shuiyu	eting Road, Haining	g City, Zhejiang P	Province, China	
Test Procedure	Testing Lab					
	Determination of the result includes consideration of measurement uncertainty from the test equipment and methods. The product was tested as indicated below with results in conformance to the relevant test criteria.					

Tests were performed on GSD8J66M-660WT to verified components below:

1. Added Solar cell 'TS-PM1212' manufactured by T.S Solar Energy Co.,Ltd.

2. Added Manufacturer 'YIYIN ENERGY THAILAND CO., LTD.'

3. Added 35mm thickness frame cross section, refer to ILL2A

Power ranges were verified on model 'GSD8J66M650WT' and 'GSD8J66M675WT'.

Test Location		o. 500 East Shuiyu	eting Road, Haining	g City, Zhejiang F	Province, China
Test Procedure	Testing Lab				
Determination of the	rocult includes co	Determination of the result includes consideration of measurement uncertainty from the text			

Determination of the result includes consideration of measurement uncertainty from the test equipment and methods. The product was tested as indicated below with results in conformance to the relevant test criteria.

The following tests were performed on Model GSD7S78T-625WT to update standard from [UL 61730-1:2017 Ed.1+R:30Apr2020], [UL 61730-2:2017 Ed.1+R:30Apr2020], [UL 61215-1:2017 Ed.1], [UL 61215-1-1:2017 Ed.1], [UL 61215-2:2017 Ed.1] to Photovoltaic [UL 61730-1:2022 Ed.2], [UL 61730-2:2022 Ed.2+R:25Apr2023], [CSA C22.2#61730-1:2019 Ed.2, [CSA C22.2#61730-2:2019 Ed.2], [UL 61215-1:2021 Ed.2], [UL 61215-2:2021 Ed.2], [

1. Frontsheet AR Coated Heat Strengthened Glass manufactured by Flat (Vietnam) Co., Ltd.

2. Solar Cell TS-TM1016 manufactured by T.S Solar Energy Co.,Ltd.

#### 8.0 Test Summary

3. Encapsulate F406PS manufactured by HANGZHOU FIRST APPLIED MATERIAL CO., LTD

4. Encapsulate EP304 manufactured by HANGZHOU FIRST APPLIED MATERIAL CO., LTD

5. Backsheet Heat Strengthened Glass with white grid manufactured by Flat (Vietnam) Co., Ltd.

6. Frame 6005-T6 manufactured by Changzhou Kaihong Aluminum Industrial Co., Ltd or YIYIN ENERGY VIETNAM CO.,LTD

7. Adhesive of frame HT906Z manufactured by Shanghai Huitian New Material Co Ltd

8. Adhesive (between junction box and backsheet) HT906Z manufactured by Shanghai Huitian New Material Co Ltd

9. Junction Box JM07w-ABCDE series manufactured by Zhejiang Jiaming Tianheyuan Photovoltaics Technology Co. Ltd

10. Cable PV Wire manufactured by Zhejiang Jiaming Tianheyuan Photovoltaics Technology Co. Ltd

11. Connectors PV-JM601A manufactured by Zhejiang Jiaming Tianheyuan Photovoltaics Technology Co. Ltd

12. Potting Material 5299W-S manufactured by Shanghai Huitian New Material Co Ltd

13. Bypass Diode RT4550 manufactured by Zhejiang Jiaming Tianheyuan Photovoltaics Technology Co. Ltd.

14. String Connector 4mm wide by 0.3m thick and 7mm wide by 0.3m thick manufactured by TaiCang JuRen PV Material Co., Ltd.

15. Cell Connector Φ0.26mm manufactured by Taicang Juren International Trade Co., Itd

16. Label AVERY PET manufactured by Jiangsu OPT Barcode Label Co., Ltd

17. Fixing Tape F1510 manufactured by Suzhou temosun PV Material Co., Ltd.

18. Flux SF105 manufactured by Singapore Asahi Chemical & Solder Industries Pte Ltd

Power ranges were verified on model GSD7S78T-610WT to GSD7S78T-640WT.

Test Description	[CSA C22.2#61730- 2:2019 Ed.2] Clause	[UL 61730- 2:2017 Ed.2+R:25Apr2 023] Clause	Clause
Visual inspection Performance at STC	10.2	-	4.1

# **10.0 General Information**

The Applicant and Manufacturer have agreed to produce, test and label ETL Listed products in accordance with the requirements of this Report. The Manufacturer has also agreed to notify Intertek and to request authorization prior to using alternate parts, components or materials.

# **COMPONENTS**

Components used shall be those itemized in this Intertek report covering the product, including any amendments and/or

## LISTING MARK

The ETL Listing mark applied to the products shall either be separable in form, such as labels purchased from Intertek, or on a product nameplate or other media only as specifically authorized by Intertek. Use of the mark is subject to the control of Intertek.

The mark must include the following four items:

1) applicable country identifiers "US" and/or "C" or "US", "C" and "EU"

- 2) the word "Listed" or "Classified" or "Recognized Component" (whichever is appropriate)
- 3) a control number issued by Intertek

4) a product descriptor that identifies the standards used for certification. Example:

**For US standards**, the words, "Conforms to" shall appear with the standard number along with the word, "Standard" or "Std." Example: "Conforms to ANSI/UL Std. XX."

**For Canadian standards**, the words "Certified to CAN/CSA Standard CXX No. XX." shall be used, or abbreviated, "Cert. to CAN/CSA Std. CXX No. XX."

Can be used together when both standards are used.

If all standards on the ATM have the same standard title, the shared title or its abbreviation may be used in place of the examples above. Example: "Medical Electrical Equipment" or "MEE"; "Information Technology Equipment" or "ITE"; "Audio/Video Information And Communication Technology Equipment" or "A/V ICTE".

**Note:** A facsimile must be submitted to Intertek, Attn: Follow-up Services for approval prior to use. The facsimile need not have a control number. A control number will be issued after signed Certification Agreements have been received by the Follow-up Services office, approval of the facsimile of your proposed Listing Mark. satisfactory completion of the Listing Report. and scheduling of a factory

# MANUFACTURING AND PRODUCTION TESTS

Manufacturing and Production Tests shall be performed as required in this Report.

#### FOLLOW-UP SERVICE

Periodic unannounced audits of the manufacturing facility (and any locations authorized to apply the mark) shall be scheduled by Intertek. An audit report shall be issued after each visit. Special attention will be given to the following:

1. Conformance of the manufactured product to the descriptions in this Report.

2. Conformance of the use of the ETL mark with the requirements of this Report and the Certification Agreement.

3. Manufacturing changes.

4. Performance of specified Manufacturing and Production Tests.

In the event that the Intertek representative identifies non-conformance(s) to any provision of this Report, the Applicant shall take one or more of the following actions:

- 1. Correct the non-conformance.
- 2. Remove the ETL Mark from non-conforming product.
- 3. Contact the issuing product safety evaluation center for instructions.

# 10.1 Evaluation of Unlisted Components

Because Unlisted Components are uncontrolled, and they do not fall under a third party follow up program, Intertek may require these components to be tested and/or evaluated at least once annually, more often for certain components, as part of the independent certification process. The Unlisted Components in Section 5.0 require testing and/or evaluation as indicated.

The Applicant will be notified, in writing, via the applicable contact methods, as defined in Section 1.0, when these components must be selected and sent to Component Evaluation Center (CEC) for re-evaluation.

Due to particular testing requirements, some components may be requested to be shipped to specific labs. Thus, specific shipment destination(s) for each sample will be provided in the written notification.

> Managing CEC Location: Intertek Testing Services Shanghai Limited ETL Component Evaluation Center Building No. 86, 1198 Qinzhou Road (North) Shanghai 200233, China Attn: Ms. Emiliana Zhou Sample Disposition: Due to the destructive nature of the testing, all samples will be discarded at the conclusion of testing unless, the manufacturer specifically requests the return of the samples. The request for return must accompany the initial component shipment.

# **11.0 Manufacturing and Production Tests**

The manufacturer agrees to conduct the following Manufacturing and Production Tests as specified: <u>Required Tests</u> Insulation Test Medule Output Power Test

Module Output Power Test Bypass Diode Functionality Test Continuity test of equipotential bonding Test Visual Inspection

# 11.1 Insulation Test

# Method

Each module (100%) shall withstand for 1 second without electrical breakdown as a routine production line test, the application of a dc test potential of  $1.2 \times (2 \times V_{SYS} + 1000V)$  where  $V_{SYS}$  is the maximum rated system voltage. The voltage shall be applied between the active circuit of the module and accessible metal parts. The test is to be conducted when the module is complete and ready for packing, or when it is complete except for covers or other parts that may interfere with the performance of the test.

#### Test Equipment

The test equipment is to include a means of indicating the test voltage that is being applied to the product under test and a means of effectively indicating unacceptable performance. A leakage current of greater than 50 µA represents a failure.

Products Requiring Insulation Test:		
	Test Voltage	<u>Test Time</u>
All products covered by this Report with 1500V system voltage	4000V	60 s
	or	
	4800V	1 s

# 11.2 Module Output Power Test

<u>Method</u>

Check the results from I-V curve measurements to verify that the output power, current and voltage rating falls within the specification. All production values of Isc and Voc shall be covered by the tolerances of the product qualified under UL 61730. Possible stabilization effects shall be considered if changes of Isc and Voc are expected during operation in sunlight. This test will also verify that bypass diodes are not shorted.

### Products Requiring Module Output Power Test:

All products covered by this report.

# 11.3 Bypass Diode Functionality Test

<u>Method</u>

Verification that bypass diodes are working properly shall be performed on all modules.

Three alternative test methods can be applied:

a) Perform successive additional I-V measurements in conjunction with maximum power determination with one cell of each string in the interconnection circuit completely shaded. The bypass diode belonging to this string is working properly, if the characteristic bend in the I-V curve is observed.

b) A conductivity test can be performed with the PV module terminals connected in reverse polarity to a current source. The current flow and voltage drop across the PV module terminals can be used as indicator that the diodes are working properly.

c) The I-V characteristics of all diodes can be verified just before their assembly. If the bypass diodes are in the junction box this could be done through measurement at the corresponding terminals of the junction box. A precondition for the latter method is an appropriate plan to mitigate possible influence of electrostatic discharges on the diodes in production.

# Products Requiring Bypass Diode Functionality Test:

All products covered by this report.

## 11.4 Continuity test of equipotential bonding Test

#### Method

PV modules provided with a connection for equipotential bonding are subjected to a continuity test for equipotential bonding (MST 13). At a sampling rate of 1 PV module per framing station per working shift demonstrate the electrical continuity between the grounding connection and all accessible conductive parts. Any appropriate indication device is able to be employed (current supply in conjunction with current and voltage measurement).

PV modules that have no frames or equipotential bonding locations identified shall be exempt from this requirement.

# Products Requiring Continuity test of equipotential bonding Test:

1 PV module per framing station per working shift

# 11.5 Visual inspection

Method

Verify the clearance distances (distances of live parts to PV module edges) are within the product specification. It is recommended to do this inspection before the framing process if applicable.

Products Requiring Visual inspection:

All products covered by this report.

<b>12.0 Revision Summary</b> The following changes are in compliance with the declaration of Section 8.1:
